June	8 · 15	2 · 9	10	4 · 11	5 · 12
Total Classes:	17	17	17	17	16

[See details behind →](#)

Basketball

Basketball involves skills such as dribbling, passing, catching, shooting, and pivoting, all of which help to improve motor skills by using large muscle groups. The coordination, specifically hand-eye coordination, required in basketball helps develop fine motor skills, which are skills that transfer to other daily activities.

What to Prepare: Shorts, a light T-shirt, suitable sports shoes and a water bottle for this activity! (Our lessons will be conducted outside.)

Kids in Motion

Kids in Motion will explore one of the most basic and beneficial activities for both the mind and the body: movement! Each week we will do different outdoor activities with movement as the central focus. From warm ups to stretching, circuit training, jumping rope, yoga, dancing, musical chairs, scavenger hunts, obstacle courses, tag, freeze game, and more. We will encourage ourselves to be present in our bodies and practice getting them moving while outside!

Soccer

During this course we will begin with the fundamentals of soccer/football. We will slowly roll out the rules of the game and the skills needed to perform while playing. Throughout all of these lessons our main goal is to have fun! I plan to teach the game of football/soccer by using a series of games and activities to keep students engaged.

What to prepare: Shorts, a light T-shirt, suitable sport shoes and a water bottle every Tuesday! (Our lessons will be conducted outside.)

Brain Games

This after school activity focuses on teaching children good sportsmanship and strategic thinking, along with improving verbal communication. Through a variety of competitive and cooperative board and card games, we hope to help each child develop important life skills all while having a ton of fun!

Phonics Power Hour

Children will learn phonics through play-like activities. Activities will be connected to what they are learning in the class. Children will enjoy phonics games & centers, stories, conversations, comprehension and lots more! They will build confidence in speaking/listening and reading/writing.

Ukulele & Singing

In our Ukulele and Singing Afterschool Class, young learners explore the joy of music through fun vocal warm-ups, rhythmic songs, and hands-on ukulele playing. They learn basic strumming patterns and beginner chords while singing and playing familiar, upbeat tunes that help develop pitch, timing, and musical confidence. The class also encourages creativity, active listening, and a love for making music together in a playful and supportive environment.

Zumba

Zumba means "moving quickly and having fun". It is the perfect way to incorporate exercise into children's lives in a fun, easy way with multiple personal and social benefits. Children will learn to move, listen to the rhythm, exercise their bodies and improve their health. It will give children an outlet to jump, dance, shake, and swing their hips.

What to wear: Sports shoes and socks, comfortable clothes ideal for fitness workouts like fitness leggings and an athletic top.

STEM

STEM stands for Science Technology, Engineering and Mathematics! STEM is important for developing problem solving skills and encourages critical thinking. Students will plan, make predictions, solve problems and evaluate their results. Stem activities such as engineering challenges or science experiments will be based around play, inquiry and creativity!

Clay Play

Clay play is an enjoyable activity amongst children. Clay helps build hand-eye coordination and develops children's small hand muscles, which is beneficial for writing, coloring, and cutting! Clay play helps students focus on the task for an extended period of time, and it is a calming and adaptable activity. It allows children to build their imagination and boosts their self-esteem too!

Remark: As it can be a messy activity, kindly send in an old t-shirt that is labelled that we can keep at school for this activity.

Athletics & Gymnastics

Gymnastics is an excellent activity for both boys and girls. It can help to develop self-confidence and self-esteem early in childhood. It enhances physical development and helps to develop skills like strength, flexibility, coordination, balance, and body control. Children will be involved in balancing activities, pass and catch, ropes and hoops and lots more!

Cooking

Cooking is an excellent educational activity where children learn to explore their senses, make healthy choices, display responsibility and learn how to share a good conversation. We will be exploring different sweet and savory dishes from around the world and working with different recipes and ingredients.

Remark: If your child has any allergies/dietary restrictions, please inform us.

Lab Explorers

Science is about connecting children's senses to the world around them. There is so much to discover! Our young scientist class will involve creative, fun and hands-on science experiments. Children will gain knowledge through observations, experimentation, and play!

Ballet

In ballet class, your child will be engaged in different exercises that strengthen the whole body, improve flexibility, coordination and balance. Your child will learn about her body parts, the way to keep her spine straight and have a good body posture. Body movements will be accompanied by classical music. It will be a great way for your child to understand her body and enjoy dance and music at the same time!

Remark: For this class, please prepare ballet costumes and ballet shoes for your child.
